

Every figure, traced to source.

Asurefy combines evidence-tracing technology with expert verification services and a network of accredited verification partners. You get regulated GHG assurance built on a complete audit trail, not a sample.

ASSURANCE IS BECOMING MANDATORY

75%

of the world's largest companies obtained third-party assurance on sustainability data in 2024.¹

2027

California SB 253 filers need limited assurance on Scope 1 and 2 emissions.²

ISSA 5000

becomes the global sustainability assurance standard from December 2026, alongside CSRD and ISSB regimes.

Most GHG assurance still runs on sampling.

A verifier picks a handful of figures, requests the backup and extrapolates confidence. That made sense when tracing everything was impossible. It isn't anymore.

1. IFAC, AICPA and CIMA, State of Play, 2026.

2. California Air Resources Board, proposed SB 253 regulation.

Technology, services and a partner network. One engagement.

Our AI builds the evidence. Our team runs the engagement. An independent, accredited verification body signs the opinion.

01 · TECHNOLOGY

Our AI traces every figure

Invoices, meter data, fuel records and PPA settlements are mapped to one emissions schema. Each figure is matched to its source document and checked against the GHG Protocol. What does not reconcile is flagged.

02 · SERVICES

Our team runs the engagement

Asurefy scopes the work, assembles the evidence package, and resolves findings with you in one tracked log. You have one point of contact from scoping to signed statement.

03 · PARTNER NETWORK

Accredited partners sign off

We work with independent verification bodies accredited under ISO 14065. The partner reviews the complete evidence and issues the assurance opinion under ISO 14064-3 or ISSA 5000, in its own name.

AN ENGAGEMENT, STEP BY STEP

01

Scope

Boundary, gases, standard and period agreed up front.

02

Ingest

Your report and source data, uploaded securely.

03

Trace

Every figure linked to source. Gaps flagged.

04

Review

Findings resolved with you, tracked to closure.

05

Sign-off

Accredited partner issues the statement.

WHAT A TRACE LOOKS LIKE			SAMPLE DATA
REPORTED	LINE ITEM	SOURCE DOCUMENT	STATUS
12,847 tCO ₂ e	Scope 1 · natural gas	utility-invoice-Q3.pdf	Traced
4,102 tCO ₂ e	Scope 2 · electricity	ppa-settlement.xlsx	Traced
921 tCO ₂ e	Scope 1 · fleet diesel	fuel-card-export.csv	Gap: 2 months missing

The document set your auditor expects.

Formats your board, auditors and regulators already recognize, built on a complete trace.

Assurance statement

The publishable one-page opinion. Standard, scope, validity and the accredited signer, named.

Verification report

Scope boundary, methodology review, opinion and qualifications, in full.

Findings log

Every nonconformity and observation, with your response and closure status.

Conformance checklist

Clause-by-clause mapping against the GHG Protocol and Scope 2 Guidance.

WHAT CHANGES FOR YOU

- **Defensible numbers.** Every figure traces to a source document your CFO and audit committee can inspect.
- **Weeks, not months.** Automated evidence work replaces rounds of email requests and manual sampling.
- **No surprises.** You see gaps before the opinion is formed, while there is still time to fix them.
- **A checkable opinion.** The signer is named and verifiable against public accreditation registers.

Verification only.

No carbon software, no consulting. There is nothing else we will try to sell you.

Works with your stack.

Asurefy sits on top of the carbon accounting tools and advisors you already use, and competes with none of them.

Plan your next assurance cycle with us.

Tell us your reporting regime and deadline. We'll scope the engagement.
